

GLOBAL LEADER IN

FUEL MANAGEMENT SYSTEMS

TAKE CONTROL OF YOUR FUEL

Benefits of FUELLink

FUELLink fuel management systems are customer driven, by listening to and working with our customers we build the best possible solutions for each industry.

Reduce Admin Times - using our automatic mileage capture solutions we remove the hours associated with correcting human error.

Account For Every Penny - by entering the cost of fuel to our software a fleet manager can identify how much each vehicle in the fleet costs to fuel.

Full Control Over Fuel - monitor exactly where your fuel is going and who is taking it by breaking down the data into time, date and quantity of fuel dispensed.

Real Time Solution - our terminals are awake and providing feedback 24/7, 365 days a year to offer the only fully live FMS terminal.

FMS Hardware

The Fuel Management Systems offer the highest level of functionality and usability for customers even while enduring the worst usage and weather conditions.

Stainless Steel - all FUELLink ST's are constructed using stainless steel to prevent rust and corrosion to the terminal, a powder coating finish enhances the aesthetics.

Biggest Brightest Display - every terminal comes fitted with a 7" full colour TV screen to ensure visibility and maximise on-screen information.

Control Up To 4 Pumps - each terminal can control up to 4 pumps inc. Diesel, Petrol, Gas Oil, AdBlue, LPG, CNG and Electric Charging Units.

Remote Area Service - high gain aerials are fitted to every terminal ensuring a great signal even in the worst of service areas.

FMS Features

FUELLink ST terminals are equipped with the latest and most advanced technology pushing the boundaries of fuel management further than ever before.

Vehicle Identification - vehicle ID is possible using VINIE (Bluetooth), Fobs (RFID), Cards and Automatic Number Plate Recognition (ANPR)

Two Way Messaging - through the FUELtran software, fleet managers are able to send messages unique to drivers and/or vehicles which must be answered in order to draw fuel.

Driver Identification - utilise FUELLink or customers RFID Fobs/ Cards or Barcode ID to improve security and speed at terminals.

Tank Gauges - our terminals are compatible with most tank gauges on the market, allowing more accurate monitoring of on-site fuel.

FMS Variants

The FUELLink ST comes in several varieties to ensure that no matter the requirement of the customers, there is a viable solution for controlling their fuel.

- Wall Mount

- Pedestal Mount

- Barcode Reader

- Bowser Mount

- VINIE Bluetooth

- Pump Integration

VINIE

Bringing Bluetooth technology to the fuel management market for the first time with automatic vehicle detection, transfer of odometer and vehicle fuel tank level data.

Reduce Telematics Costs - with no rolling costs VINIE provides fleet odometer readings, saving the monthly cost of gaining this data via the existing telematics solution.

Accurate CAN Data - direct from the vehicle ECU to ensure 100% accurate data removing human error to speed up fuelling times.

Detect Fuel Siphoning - transfer of the vehicles fuel tank % allows fleet managers to detect fuel siphoning or under performing vehicles via MPG.

Telematics Integration

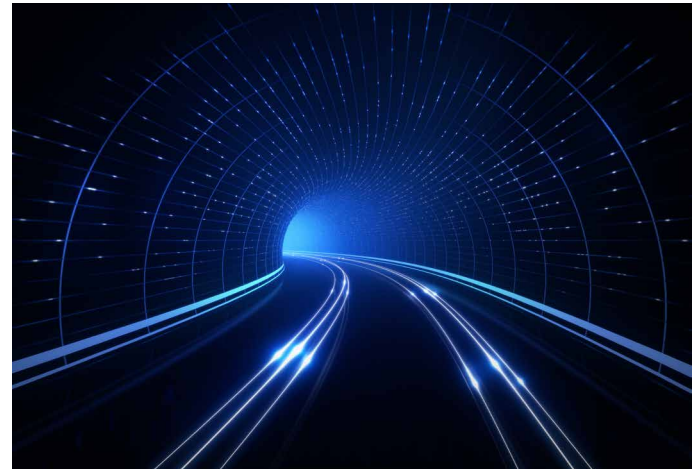

Using your existing telematics solution, our FUELtran software is capable of interfacing through an API key in order to transfer vehicle mileage data.

Utilising Existing Equipment - by using an existing setup more familiar to the customer we can enhance the efficiency of back office procedures and reporting.

Scalability - allowing customers to target specific issues within their fleet by selecting specific vehicles for data transfer.

Fuel Card Update - utilise telematics to perform retrospective update of fuel card records, creating more usable data for MPG reports.

Customised Data - tailoring the transfer of information to suit each individual customer's requirements.

CONTROL FUELLING ACCESS TIMES

DIESEL

Tighter Control Over Fuel

Controlling vehicle fuel usage can be an arduous task, use the FUELlink solutions to reduce the time and stress associated with stock control.

Limit Fuel Times - through the FUELtran software the availability of access to fuel can be restricted to set times, ensuring peace of mind.

Fuel Card Data - import fuel card reports to the FUELtran software to improve the information available, aid fuel usage monitoring and vehicle MPG figures.

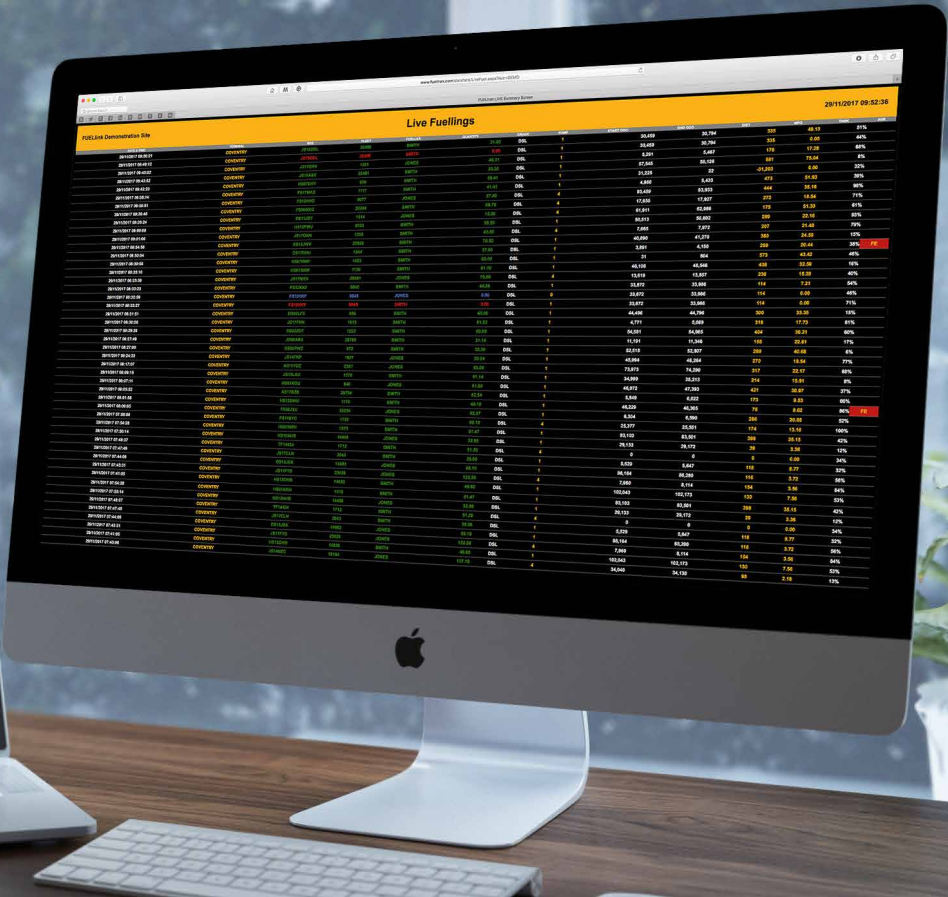

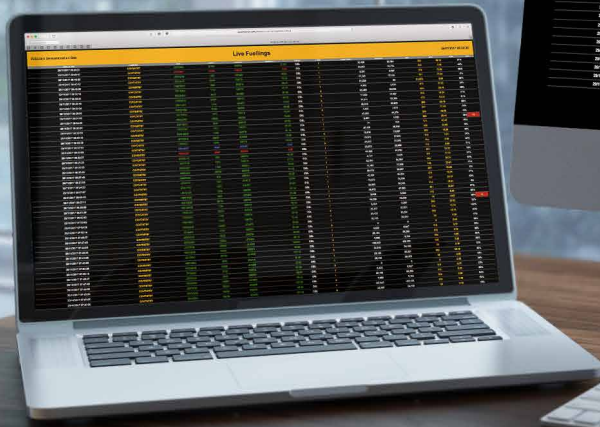

Tank Gauges - compare your calculated fuel stock against actual live data straight from the tank gauge with the FMS Tank Gauge link.

Control Fuel Allocation - restrict the quantity of fuel allowed to each vehicle on a daily, weekly or monthly basis.

- Control fuelling on and off site

LIVE DEPOT FUELLING SCREENS

Live Fuelling Screens

Every FUELlink package comes with the live fuelling screen which gives live data across multi depots, giving control over fuel dispensed in real time.

Quickly Identify Errors - using a colour code to identify pump time outs and zero odometer transactions allowing a fast response solution.

View Everywhere - Live fuel screen is compatible with desktop, laptop, tablet and mobile devices, automatically updating every 60 seconds.

Multiple Screen Projection - hook up your devices to multiple screens/TV's to view fuelling across multiple depots from one location.

FUELtran Software

The powerful FUELtran software from FUELlink comes as standard with each terminal, this software is accessible via any web enabled device from anywhere in the world.

Fuel Tank Capacities - use the easy to read graphics and identify tanks that are satisfactory, at re-order or at critical low level.

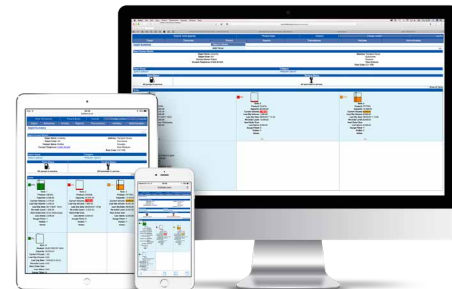

Enable Pump Control - the ability to enable and disable fuel pumps from any internet compatible device.

Equipment Status - straight from log in, gain insight into any equipment that is out of service.

Transactions List - full transaction history for multi fuel depots.

Full Reports Package - all reports come as standard with the FUELtran software at no extra cost.

Export Reports - reports can be created in various formats and can be exported to 3rd party software.

About FUELLink Systems

FUELLink ST terminals are brought to you by FUELLink Systems Ltd based in Scotland with the global lead in Fuel Management Technology.

Distributors Across 3 Continents - FUELLink distributors are based in England, Ireland, Turkey, Brunei, Singapore and East Africa.

Full Training and Support - our distributors are given all relevant training to supply, install and support FUELLink terminals and software.

Unbeaten on Value - we believe in combining the best Fuel Management technology and top of the range material standards, to give the best value FMS terminal on the market.

Interested in becoming a distributor? Contact sales@fuellinksystems.com
